

Wireshark Network Analysis Assignment

Name: Krishna Kumar Tiwari
Batch: Ethical Hacking JOVAC

Objective

Analyze the provided traffic.pcapng network capture and answer the assigned packet-analysis questions using Wireshark.

Capture File: traffic.pcapng
Tool: Wireshark

Analysis Results

E1. Number of DHCP messages

Answer: 5

Wireshark Display Filter: dhcp

E2. Number of ARP messages

Answer: 680

Wireshark Display Filter: arp

E3. IP address that accessed 'baidu.com'

Answer: 10.103.51.159

E4. Packets sent by 10.103.0.20

Answer: 469

Wireshark Display Filter: ip.src == 10.103.0.20

E5. Number of UDP packets

Answer: 8610

Wireshark Display Filter: udp

E6. Number of SMB packets

Answer: 518

Wireshark Display Filter: smb || smb2

E7. Packets sent to 10.103.0.20

Answer: 547

Wireshark Display Filter: ip.dst == 10.103.0.20

E8. Number of IPv4 packets

Answer: 24906

Wireshark Display Filter: ip

E9. Source IP of the last SMB packet

Answer: 10.103.50.202

E10. MAC address associated with 151.139.128.14

Answer: 00:1c:7f:6c:96:3f

E11. Protocol used in packet 416

Answer: UDP

E12. Destination IP of packet 416

Answer: 10.103.0.20

E13. Source IP of the first HTTP packet

Answer: 10.103.51.159

Wireshark Display Filter: http

E14. Source port of the first HTTP packet

Answer: 64079

Wireshark Display Filter: http

E15. Duration of the capture

Answer: 348.109916 seconds (approximately 348.11 seconds)

E16. Number of NBNS packets

Answer: 963

Wireshark Display Filter: nbns

E17. TCP packets with source port 443

Answer: 7275

Wireshark Display Filter: tcp.srcport == 443

E18. TCP packets with destination port 443

Answer: 5966

Wireshark Display Filter: tcp.dstport == 443

E19. Packets sent to destination IP 204.79.197.200

Answer: 116

Wireshark Display Filter: ip.dst == 204.79.197.200

E20. MAC address and vendor associated with 204.79.197.200

Answer: 00:1c:7f:6c:96:3f — Check Point Software Technologies

Conclusion

The capture was examined for protocol counts, IP and port filters, packet-specific details, capture duration, and MAC-address information. The findings above summarize the requested E1-E20 results.
